NAME

llvm−stress − generate random .ll files

SYNOPSIS

llvm-cov [−gcno=filename] [−gcda=filename] [dump]

DESCRIPTION

The **llvm-stress** tool is used to generate random .ll files that can be used to test different components of LLVM.

OPTIONS

−o *filename*
Specify the output filename.

−size *size*
Specify the size of the generated .ll file.

−seed *seed*
Specify the seed to be used for the randomly generated instructions.

EXIT STATUS

llvm-stress returns 0.

AUTHOR

llvm-stress is maintained by the LLVM Team (<http://llvm.org/>).
