MathWorks Product Installation

This chapter describes how to install MathWorks® products.

Security Considerations for Installing MathWorks Products

When installing MATLAB and other MathWorks products using the installer available from MathWorks Downloads, keep the following security considerations in mind.

Use a Secure Location

When running the installer, ensure that it is executed in a secure location to which only authorized users have write access. Avoid using universally writable directories, such as `\tmp` or `C:\Windows\Temp`, to mitigate the risk of unauthorized modification or exploitation.

Limit Privileges When Possible

Run the installer with the minimum necessary privileges. Avoid using administrative accounts unless required for the installation process. This practice minimizes the potential impact of any malicious exploitation.

Monitor the Installation Process

Be vigilant during the installation process. If the installation requires administrative privileges, ensure that you trust the source and are aware of the actions being performed.

Related Examples

- “Download and Install MATLAB” on page 1-3
- “Install MathWorks Products on Offline Computer” on page 1-9

Download and Install MATLAB

You can install MATLAB, Simulink, and accompanying toolboxes and blocksets on your personal Windows, Linux, or macOS computer by downloading and running the interactive MATLAB installer.

Before You Install

Before you install MATLAB, keep these points in mind:

- To download the MATLAB installer, you must have a MathWorks Account.
 - If you have a MATLAB license through your organization, use your organization's email address when creating the account or signing in to the account.
 - If you bought a license or got a trial directly from the MathWorks Store, sign in to the account you used to purchase the license.
- Your computer must meet the MATLAB system requirements for your platform:
 - MATLAB System Requirements for Windows
 - MATLAB System Requirements for Linux
 - MATLAB System Requirements for Mac

Install MATLAB

To install MATLAB, download the installer for your platform and MATLAB release from MathWorks Downloads. Then, run the installer and follow the prompts to complete the installation.

Security Considerations When installing products, use a secure location, limit privileges when possible, and monitor the installation. For more details, see “Security Considerations for Installing MathWorks Products”.

This table provides more detailed installation instructions for each platform.

Platform	Instructions
Windows	<p>To install MATLAB on Windows:</p> <ol style="list-style-type: none"> 1 From MathWorks Downloads, select a MATLAB release and download the installer. 2 Double-click the downloaded installer and follow the prompts to complete the installation. <p>Default installation folder: C:\Program Files\MATLAB\R20XXy</p> <p>To start MATLAB after the installation is complete, see .</p>

Platform	Instructions
Linux	<p>To install MATLAB on Linux:</p> <ol style="list-style-type: none"> 1 From MathWorks Downloads, select a MATLAB release and download the installer. 2 Unzip the downloaded installer files and navigate to the unzipped folder. For example, use these commands to unzip the installer for release <i>R20XXy</i> to a folder of the same name, and then navigate to the folder. <pre>unzip matlab_R20XXy_Linux.zip -d ./matlab_R20XXy_Linux cd ./matlab_R20XXy_Linux</pre> 3 In the installation folder, run the <code>install</code> script and follow the prompts to complete the installation. <pre>xhost +SI:localuser:root sudo -H ./install xhost -SI:localuser:root</pre> <p><code>sudo</code> is required only when you install products to a folder where you do not have write permissions, which might include the default installation folder. The <code>xhost</code> commands are required only when you install products as the root user with <code>sudo</code>. These commands temporarily give the root user access to the graphical display required to run the installer.</p> <p>Default installation folder: <code>/usr/local/MATLAB/R20XXy</code></p> <p>To start MATLAB after the installation is complete, see .</p>
macOS	<p>To install MATLAB on macOS:</p> <ol style="list-style-type: none"> 1 From MathWorks Downloads, select a MATLAB release and download the installer. 2 Unzip the downloaded DMG file and double-click it to mount the installer as a virtual disk. 3 Double-click the installer and follow the prompts to complete the installation. 4 (<i>macOS Apple silicon only</i>) Install a Java runtime on your Mac. To get a compatible runtime, see MATLAB on Apple Silicon Macs. <p>Default installation folder: <code>/Applications/MATLAB_R20XXy.app</code></p> <p>To start MATLAB after the installation is complete, see .</p>

If you need to install additional products later, use the Add-On Explorer in MATLAB. On the **Home** tab, in the **Environment** section, click **Add-Ons**.

To access additional resources for which you are licensed, go to matlab.mathworks.com and sign in to your MathWorks Account. Resources include MATLAB Online (access MATLAB from a web browser) and online training (self-paced interactive courses).

Troubleshoot Common Installation Issues

If you have trouble installing MATLAB products, review the following common issues that might occur during the installation process. If you continue to have problems, contact support. Provide any error messages, log files, or screenshots related to the problem in your help request.

Internet Connection Issues

If you lose your internet connection while installing, try rerunning the installer. If you continue to have connection issues, see [Why do I get a connection error when installing or activating MATLAB or other MathWorks products?](#)

tmp Folder Not Large Enough

During installation, the MathWorks installer temporarily stores files in the tmp folder of your platform. If you get an error that your tmp folder is not large enough to complete the installation, you can change where the installer stores these files. See [How can I change the temp directory the MATLAB installer uses?](#)

Licensing Issues

During installation, the license you want to select might not be listed. Or, you might be prompted to enter an Activation Key and not have the option to select a license.

- If your MathWorks Account is tied to an organization, such as a company or university, contact your IT department to get the license information needed to complete the installation.
- If your MathWorks Account is not tied to an organization, you might need to purchase a new license or get a trial from the MathWorks Store.

MATLAB Does Not Start

If MATLAB does not start after installation, try following the potential solutions listed in the [MATLAB Answer](#) for your platform.

- [Why will MATLAB not start up properly on my Windows based system?](#)
- [Why will MATLAB not start up properly on my Linux machine?](#)
- [Why will MATLAB not start up properly on macOS?](#)

Download Products Without Installing

Download products without installing them immediately (either on the same or a different computer). This procedure is useful when you want to install MathWorks products later, on one or more computers, either connected to the internet or offline. You must be an administrator for a license linked with your MathWorks Account (this includes trial licenses).

After you download the installer and products, you can install MathWorks products from the download location at any time. If you are using a File Installation Key, make sure the downloaded product files include the installer file and are in a location that an off-network computer can access.

Note To download the installer and product files, you must be using a computer connected to the internet.

Before You Begin

MathWorks Account

To download the product installer, you must have a MathWorks Account or access to one. If you have an individual license, a MathWorks Account was created for you during your purchase.

If you do not have a MathWorks Account, select one of the following procedures determined by your situation:

Your Situation	Action
You are using your university's license.	Go to your institution's portal to install.
You are using your company's (network) license.	After you have created your MathWorks Account, you can continue to "Step 1. Download Installer and Product Files". If your administrator has downloaded the installer and product files, find out where you can access them and then go to "Install Documentation on Permanently Offline Computers".
You are using your company's Enterprise license.	See your license administrator.
You do not have a product license or trial.	Go to the MathWorks Store.

Make Sure Offline System Meets Requirements

If you are planning to install products on an offline machine, make sure the offline system meets System Requirements for MATLAB.

Troubleshoot Connection Issues During Download

If you lose internet connection while downloading, you will need download again. If you continue to have connection issues, consider creating a more reliable internet connection (either moving closer to the router or using an Ethernet cable) or changing machines.

For additional suggestions on diagnosing internet connection issues, see this MATLAB Answer.

Step 1. Download Installer and Product Files

Sign in to your MathWorks Account. If you have Two-Step Verification enabled (in your MathWorks Account), enter the verification code sent to your primary method.

- 1 From the Downloads page on MathWorks, select the release and platform of the computer that you are using to download (not the target computer).
- 2 Start the installer. When prompted to allow the app to make changes, answer **Yes**.
- 3 If prompted again, sign in to your MathWorks Account and accept the MathWorks license agreement.
- 4 From the installer, select **Advanced Options > I want to download without installing**.

Step 2. Select Destination Folder

Enter the path to the folder where you want to download the installer and product files.

When specifying a folder name:

- You can use any alphanumeric character and some special characters, such as underscores.
- You cannot use non-English characters.
- Folder names cannot contain invalid characters and the destination cannot be named “private.”

The destination folder must be on an absolute path.

Step 3. Select Platform

Select the platform of the computer you are going to be installing MATLAB on. You can select multiple platforms, but note that all platforms are downloaded into the same top level folder.

Downloading on Windows for Linux or macOS If you download the installer on Windows for installation on Linux, before you install on the target machine, you must transfer the files to the machine without compressing them in a file, such as a ZIP archive. Otherwise, you get an error after uncompressing the ZIP archive because Windows can't reliably recreate the symbolic links that were created prior to compression. See this MATLAB Answer for details and solutions.

Step 4. Select Products

The Product Selection list shows all the products available across all of your linked licenses.

- To make a particular product available for installation on the target computer, check the box next to its name. MATLAB is selected by default.
- If you do not want to have a particular product available for installation on the target computer, clear the check box next to its name.
- If any of your selected products have a dependency on a product that was not selected, you will get a Product Dependencies warning and you will be asked to add the dependent products.

Dependent products are optional and you can choose to add or not add them. However, while you are still able to install the selected products without dependent products, you may not be able to access all the functionality you require.

- Required products must be installed.

When the software is installed, the products available for installation will depend on what is allowed on the license.

Step 5. Confirm Selections and Download

- 1 Review the summary of your download choices. To change a setting, click the topic on the navigation bar. To proceed with the download, click **Begin Download**.
- 2 When the download is complete, click **Close**.

Step 6. Move Installer and Product Files (Optional)

If the target machine is an offline machine, copy the products files (including the installer file) to the target computer or an accessible location (for example, a USB drive or network share).

Verify that the folder containing the product files includes the following:

- The installer file for the target platform in the root of the folder:
 - **Windows**— `setup.exe`
 - **Linux**— `install`

If you plan to run the installer using the root account, see this MATLAB Answer: [Why can't I install MATLAB with the root account in Linux?](#)

- **macOS (Intel processor)**— `InstallForMacOSIntelProcessor`
- **macOS (Apple silicon)**— `InstallforMacOSAppleSilicon`
- An archives subfolder

If the archives subfolder contains less than three files, you might be missing required files and must download the files again.

Next Steps

The procedure you follow depends on whether or not the target computer is connected to the internet.

- **With internet connection:** use the procedure in “Download and Install MATLAB” on page 1-3
- **Offline:** use the procedure in “Install MathWorks Products on Offline Computer” on page 1-9

See Also

Related Examples

- “Install MathWorks Products on Offline Computer” on page 1-9

Install MathWorks Products on Offline Computer

Use this procedure when you want to install MathWorks products on a computer that does not have an internet connection. You can use this procedure even if you have an internet connection; you are not required to disconnect the target computer.

To prepare for this workflow, you must get the following items:

- A File Installation Key and license file. See “Step 1. Get License File and Installation Key”.
- The product installer and product files using the procedure in “Download Products Without Installing” on page 1-6. Make sure you move the installation files along with the license file and file installation key to the target computer.

Downloading on Windows for Linux or macOS If you download the installer on Windows for installation on Linux or macOS, when you install on the target machine, you will get an error because Windows® can't reliably recreate the symbolic links that are included with the UNIX® installers. See this MATLAB Answer for details and solutions.

You must have the correct permissions to install MathWorks software. If you have questions about permissions, ask your system administrator.

Before You Begin

To avoid problems during the installation process, read these important notes before you begin.

Make Sure Your System Meets Requirements

Before you begin, see System Requirements for MATLAB.

Change the tmp directory for installation

To change the tmp folder for installation, see MATLAB® Answer How can I change the temp directory the MATLAB installer uses?

Connection Errors

If you get connection errors while running the installer for an offline workflow, then you most likely do not have all the installation files required to install MathWorks products using a File Installation Key. Using a computer connected to the internet, go to “Download Products Without Installing” on page 1-6 to restart the workflow from the beginning.

Step 1. Get License File and Installation Key

- Individual license users can get their license file and file installation key (FIK) from License Center.

Using a computer with an internet connection:

- 1 Sign in to your MathWorks Account and click the license you want to use.
- 2 Go to the **Install and Activate** tab. If you have not activated a computer for this license yet, click **Activate** to activate the license, download the license file, and get the file installation key.

If you have already activated the license, and you have the file installation key, you can click the download arrow or email icon under **Get License File** instead.

- 3 Download and save these items on removable media (for example, a USB stick).
 - 4 Copy the license file and file installation key to the target computer.
- Network license users can get the network license file and FIK from their license or network administrator and copy them to their machine.
 - Administrators can get a copy of the network license file from the server hosting the network license manager and the file installation key (FIK) from License Center (do not give your users the license file downloaded with the FIK).
 - If you are using a trial license, go to <https://www.mathworks.com/licensecenter/trials>.

Step 2. Start Installer

Start the installer using the target machine's platform-specific instructions, as shown in this section. When prompted to allow the app to make changes, answer **Yes**.

Security Considerations When installing products, use a secure location, limit privileges when possible, and monitor the installation. For more details, see “Security Considerations for Installing MathWorks Products”.

Windows

On Windows systems, the default installation directory is:

```
C:\Program Files\MATLAB\R2024a
```

To launch the installer on Windows systems:

- 1 Double-click the `setup.exe` file to launch the installer.
- 2 When asked if you want to allow the application to make changes, answer **Yes**.
- 3 If your computer has been configured to use a proxy server for internet access, enter the user name and password to continue with a standard installation. Contact your system administrator for proxy server credentials.

Linux

On Linux® systems, the default installation directory is:

```
/usr/local/MATLAB/R2024a
```

Note You must install MathWorks products to a directory where you have write permissions. Root privileges are not required to run the installer unless you want to install to the default directory.

Follow these steps to install on Linux:

- 1 At the system terminal, unzip the `matlab_R2024a_Linux.zip` installer archive to the `matlab_R2024a_Linux` directory by entering:

```
unzip matlab_R2024a_Linux.zip -d matlab_R2024a_Linux
```

2 Navigate to the `matlab_R2024a_Linux` directory.

- To launch the installer and install to a directory where you have write permissions, execute:

```
./install
```

When prompted by the installer, specify the folder for installation.

- To launch the installer as root, execute:

```
sudo ./install
```

If the installer fails to launch as root, it might not have access to the graphical user interface that you need for installation. Try this workaround:

```
xhost +SI:localuser:root
sudo -H ./install
xhost -SI:localuser:root
```

This allows the root user to access the running X server, launches the installer, and then removes the root user from accessing the X server.

macOS (Intel Processor)

On macOS Intel® processor systems, the default installation directory is:

```
/Applications/MATLAB_R2024a.app
```

To install on macOS Intel processor systems:

- 1 Double-click the `matlab_R2024a_macOSIntelProcessor.dmg.zip` file to unzip the disk image.
- 2 Double-click the `matlab_R2024a_macOSIntelProcessor.dmg` disk image file to mount the virtual disk.
- 3 Double-click the `InstallForMacOSIntelProcessor` installer file in the virtual disk to launch the installer.
- 4 If your computer has been configured to use a proxy server for internet access, enter the user name and password to continue with a standard installation. Contact your system administrator for proxy server credentials.

macOS (Apple Silicon)

On macOS Apple silicon systems, the default installation directory is:

```
/Applications/MATLAB_R2024a.app
```

To install on macOS Apple silicon systems:

- 1 Double-click the `matlab_R2024a_macOSAppleSilicon.dmg.zip` file to unzip the disk image.
- 2 Double-click the `matlab_R2024a_macOSAppleSilicon.dmg` disk image file to mount the virtual disk.
- 3 Double-click the `InstallForMacOSAppleSilicon` installer file in the virtual disk to launch the installer.
- 4 If your computer has been configured to use a proxy server for internet access, enter the user name and password to continue with a standard installation. Contact your system administrator for proxy server credentials.

The native Apple silicon MATLAB requires that a Java® runtime be installed on your Mac. To obtain a compatible Java runtime, see MATLAB on Apple Silicon Macs

Step 3. Accept License Agreement

Review the software license agreement. If you do not agree with the terms of the license agreement, you will be unable to install MathWorks products.

Step 4. Enter File Installation Key

Enter the File Installation Key where prompted.

- If the product files are not found by the installer, you will get an error before you enter the File Installation Key. This message includes instructions for downloading the necessary files.
- If you get a message saying that the key is invalid, check to make sure you entered the key correctly. If necessary, get a new File Installation Key.
- If you get a message saying that the key is invalid for the release you are trying to install, see your administrator or go to the License Center to get the files for the File Installation Key you have. If you are using a trial license, go to <https://www.mathworks.com/licensecenter/trials>.

Step 5. Select License File

The license file is required for installation when you use a File Installation Key. It identifies which products you can run.

- The file must be a valid license file.
- If the installer detects that the license file is invalid for any reason, use a different license file or get a new license file.

Step 6. Select Destination Folder

The destination folder is where you want to install MathWorks products. Accept the default installation folder, or click **Browse** to select a different one. If the folder does not exist, the installer creates it.

The destination folder must be on an absolute path. MathWorks recommends that you install MathWorks products in their own folder. If you select the top-level drive, you will be asked to confirm your selections.

When specifying a folder name:

- You can use any alphanumeric character and some special characters, such as underscores.
- You cannot use non-English characters.
- Folder names cannot contain invalid characters and the destination cannot be named “private.”

If you make a mistake while entering a folder name and want to start over, click **Restore Default**.

Changing the tmp directory for installation To change the tmp folder for installation, see MATLAB Answer How can I change the temp directory the MATLAB installer uses?

Step 7. Select Products

The Product Selection list shows all the products associated with the File Installation Key you specified.

- To install a particular product, check the box next to its name. MATLAB is selected by default.
- If you do not want to install a particular product, clear the check box next to its name.
- If any of your selected products have a dependency on a product that was not selected, you will get a Product Dependencies warning and you will be asked to add the dependent products.

Dependent products are optional and you can choose to add or not add them. However, while you are still able to install the selected products without dependent products, you may not be able to access all the functionality you require.

- Required products must be installed.

Step 8. Select Options

Some options are available only for certain license types. If no options are presented to you, you can go to the next step.

- **Windows** — You can choose to put shortcuts for starting MATLAB in the **Start** menu and on the desktop.
- **Linux** — You can specify whether you want to create symbolic links to the `matlab` and `mex` scripts. Specify a folder to which you have write access and that is common to all the user paths on this computer, such as `/usr/local/bin`.

Step 9. Confirm Selections and Install

Review the summary of your installation choices. To change a setting, click the topic on the navigation bar. To proceed with the installation, click **Begin Install**.

When the installation is complete, note if the installer shows you any additional steps required to complete configuration, and click **Finish**. If additional steps are required, complete them before running MATLAB.

If you are installing server products, see “Install MATLAB Server Products”.

License or System Administrators Only If you run into unrecoverable errors, or if your organization has complex license mixing issues, consider performing an ISO download instead. See [How do I download a MATLAB ISO archive?](#)

Related Examples

- “Download Products Without Installing” on page 1-6
- “Install Documentation on Permanently Offline Computers”

Add Toolboxes and Products to MATLAB Installation

Depending on how you want to expand your MathWorks software, you can purchase and install additional products or extend the capabilities of products you are already licensed for.

- Additional Products and Toolboxes — Additional products contain functionality that can be used in conjunction with MATLAB and Simulink®.

When you purchase additional products to add to a license you already own, rerun the installer to add those products to your existing installation. This procedure is exactly the same as when you installed your original products for the first time.

- Single installation — See the instructions in “Download and Install MATLAB” or “Install MathWorks Products on Offline Computer”.
- Multiple installations — Administrators, select a procedure from “Install Products on Client Machines”.
- Add-Ons — Add-ons extend the capabilities of MATLAB by providing additional functionality for specific tasks and applications, such as connecting to hardware devices, additional algorithms, and interactive apps.

To learn more, see .

Related Examples

- “Install Products”

Install Documentation

By default, when using MATLAB, you access product documentation on the web. This reduces the installation footprint.

To use documentation when your computer is not connected to the internet—either temporarily or permanently—you can install the documentation on your machine.

- The documentation installer installs documentation for every product installed on your machine for the release of MATLAB you are using to install the documentation. If you have multiple releases of MATLAB on the same machine, run the installation procedure from each of those MATLAB versions.
- If MATLAB was installed using a Designated Computer or Network license, you can install the documentation just one time to have it be available to all users on that license using the machine.
- The amount of disk space the documentation requires depends on how many documentation sets you are installing. The full documentation set requires more than 10 GB of disk space.

When you are ready to begin, select a procedure from the following table.

Scenario	Workflow
Your machine is usually connected to the internet when using MATLAB but you work offline occasionally.	“Install Documentation for Temporary Offline Use”
Your machine is permanently offline.	“Install Documentation on Permanently Offline Computers”
For administrators: You want to make the documentation available on the network server.	“Install Documentation on Network Server” Note Make sure that the MATLAB installed on the network server includes <i>all</i> the toolboxes and add-ons that clients may use so that the documentation installer knows what product documentation sets to install.

Install Documentation for Temporary Offline Use

When using MATLAB, you access product documentation on the web, by default. If you need offline access to the documentation, you can download and install it when your computer is connected to the internet, and then access the locally installed documentation when your computer is temporarily offline.

If the computer you use is permanently offline, see “Install Documentation on Permanently Offline Computers”.

Download and Install Documentation (Requires Internet Connection)

To download and install the documentation, follow these steps:

- 1 Open MATLAB.
- 2 On the **Home** tab, in the **Environment** section, click **Preferences**.
- 3 In the left pane of the Preferences dialog box, click **MATLAB**, and then click **Help**.
- 4 Under **Documentation Location**, select **Installed locally**.
- 5 Click **Install Documentation**.

MATLAB installs the documentation in the support package root folder. To find the support package root, use the function `matlabshared.supportpkg.getSupportPackageRoot`.

- 6 Restart MATLAB.
- 7 Verify that MATLAB opens the locally installed documentation. At the MATLAB command prompt, enter: `doc`

On the documentation home page that opens, place your cursor on one of the links and check the format of the URL that appears in the bottom-left corner. If the URL is a local file path (for example, `file:///C:/ProgramData/MATLAB/...`), then MATLAB is opening the local documentation.

To update installed documentation after adding or removing products, or to install the most recent documentation, repeat this procedure.

Revert to Web Documentation

To revert to opening documentation from the web, follow these steps:

- 1 Open MATLAB.
- 2 On the **Home** tab, in the **Environment** section, click **Preferences**.
- 3 In the left pane of the Preferences dialog box, click **MATLAB**, and then click **Help**.
- 4 Under **Documentation Location**, select **Web, on mathworks.com**.
- 5 Restart MATLAB.
- 6 Verify that MATLAB opens the web documentation. At the MATLAB command prompt, enter: `doc`

On the documentation home page that opens, place your cursor on one of the links and check the format of the URL that appears in the bottom-left corner. If the URL is a web path (for example, `https://www.mathworks.com/help/...`), then MATLAB is opening the web documentation.

Install Documentation on Permanently Offline Computers

When using MATLAB, you access product documentation on the web, by default. To use the documentation on a computer that is permanently offline, you can download the documentation, copy it to the offline machine, and install it on that computer.

If you typically work with MATLAB while connected to the internet and only occasionally work offline, see “Install Documentation for Temporary Offline Use”.

Prerequisites

- In this procedure, you download a documentation ISO (Windows and Linux) or DMG (macOS) image and mount it on the offline machine. Knowledge of IT concepts is recommended, but not required.
- The computer you use to download the documentation must have an internet connection.
- To download the documentation, you must have a MathWorks Account. Installing the documentation on the offline computer does not require a MathWorks Account.
- Both the computer you use to download the documentation and the offline computer must have more than 10 GB of available disk space to accommodate the size of the documentation ISO or DMG image.
- MATLAB must already be installed on the offline computer.

Download Documentation (Requires Internet Connection)

To download the documentation for R2024a, in the **Operating Systems** list shown here, select the operating system for the target offline machine. Then, click **Download documentation**.

Select Operating Systems

Download Documentation

To download documentation for other releases, follow these steps:

- 1 From MathWorks Downloads, in the **Select Release** list, select the release you want to download.
- 2 From the **I Want To** list, select Get ISOs and DMGs.
- 3 Expand **Get MATLAB and Simulink Product Documentation**.
- 4 Click the **Learn more** link to open the instructions for downloading and installing the documentation for the selected release. Follow the instructions on that page instead of this page.

Copy Documentation to Offline Machine

Copy the documentation ISO or DMG image that you downloaded to the offline machine using removable media or a shared network location. Then, on the offline machine, mount the

documentation ISO or DMG image using the standard process for your platform. For more details, see [How do I install MathWorks products using an ISO or DMG image?](#)

Install Documentation on Offline Machine

Install the documentation on the offline machine using the `mpm` command line tool. `mpm` is included as part of the downloaded documentation ISO or DMG image.

Note Perform these steps from the command line for your operating system. Do not run these commands from MATLAB.

- 1 From the operating system command line, navigate to the folder within the mounted image that contains the documentation installer.

```
cd mountedDocImage/bin/arch
```

- *mountedDocImage* is the root of the mounted documentation ISO or DMG image.
- *arch* is the operating system architecture folder of the ISO or DMG image, such as `win64`, `glnxa64`, `maci64`, or `maca64`.

- 2 Run the documentation installer by using the `mpm install-doc` command. Specify the `--matlabroot` option to set the folder where MATLAB is installed on the offline machine.

Windows

Syntax:

```
.\mpm install-doc --matlabroot=matlabroot
```

Example:

```
.\mpm install-doc --matlabroot="C:\Program Files\MATLAB\R2024a"
```

If the *matlabrootfolder* path includes spaces, enclose the path in double quotes, as shown in the example.

Linux or macOS

Syntax:

```
./mpm install-doc --matlabroot=matlabrootfolder
```

Example:

```
./mpm install-doc --matlabroot=/home/username/matlab
```

By default, `mpm` installs the documentation to the support package root folder within MATLAB. To find the support package root, use the function `matlabshared.supportpkg.getSupportPackageRoot`.

To specify a different location for the documentation, use the `--destination` option. If you mount the documentation ISO or DMG image in a location other than where MATLAB is installed, such as a network drive, use the `--source` option to provide the complete path to the installer files.

Windows

```
.\mpm install-doc --matlabroot=matlabrootfolder --source=docinstallfolder --destination=destinationfolder
```

Linux or macOS

```
./mpm install-doc --matlabroot=matlabrootfolder --source=docinstallfolder --destination=destinationfolder
```

Note If the error **Conflicting release versions** appears during installation, verify that the documentation ISO or DMG image is for the same release as the MATLAB software installed on the offline machine. The release name is included in the filename of the ISO or DMG image.

- 3 Unmount the documentation ISO or DMG image. If you need to reclaim the disk space, delete the image.

Configure MATLAB to Use Installed Documentation

Update the MATLAB preferences so that MATLAB opens the installed documentation instead of the web documentation.

- 1 Open MATLAB.
- 2 On the **Home** tab, in the **Environment** section, click **Preferences**.
- 3 In the left pane of the Preferences dialog box, click **MATLAB**, and then click **Help**.
- 4 Under **Documentation Location**, select **Installed locally**.
- 5 *This step is required only if you installed the documentation somewhere other than the default location by using the `--destination` flag.*

Update the documentation root so that MATLAB points to where you installed the documentation.

- a Open the MATLAB `startup.m` file. If this file does not exist, create a blank file with this name. Commands specified in this file run when MATLAB starts up. For more details on `startup.m` files, see .
- b In your `startup.m` file, add this line to set the documentation root to the new documentation location. `newDocInstallFolder` is the path to the folder where you installed the documentation.

```
docroot('newDocInstallFolder/help')
```
- c Restart MATLAB.

Verify Local Installation

Verify that the documentation opens locally. At the MATLAB command prompt, enter: `doc`

- If the documentation home page opens, place your cursor on one of the links on the page that opens and check the format of the URL that appears in the bottom-left corner. If the URL is a local file path (for example, `file:///C:/ProgramData/MATLAB/...`), then MATLAB is opening the local documentation.
- If a blank page opens, or if the documentation home page URLs display web paths (for example, `https://www.mathworks.com/help/...`), then MATLAB is still opening the web documentation. Update MATLAB to point to the locally installed documentation, as described in “Configure MATLAB to Use Installed Documentation”.

Update Documentation on Offline Machine

To update installed documentation after adding or removing products, or to install the most recent documentation, repeat the previous procedures.

- “Install Documentation on Network Server”

Install Documentation on Network Server

Note These instructions are for administrators only.

Defaulting to web documentation is the best way to ensure that your users are getting the most up to date documentation for their installed products. However, if you need to provide access to documentation for your users with machines that can't access the internet, you can choose to install documentation on a network server that all of your users can access instead of installing documentation on individual machines. The advantages to this setup are that:

- Users do not need to store large amounts of documentation on their machines.
- Users do not have to remember to update documentation when products are added or deleted.
- As long as you keep it updated, users always access the most recent documentation that is available for installation.

Note Make sure MATLAB is installed on the network server. You don't have to have it running, nor does it even need to be in use, but MATLAB must be installed.

In addition, make sure that the MATLAB installed on the network server includes ALL the toolboxes and add-ons that clients may use so that the documentation installer knows what product documentation sets to install. If you omit a product your users are accessing, they do not get the documentation for that product.

To install documentation on the network server:

- 1 Follow the procedure in "Install Documentation on Permanently Offline Computers" to download and install documentation on the network server.
- 2 Edit the `startup.m` file for each user on each computer that has MATLAB and set the documentation root to the network server documentation location.

In the `startup.m` file, add this line:

```
docroot(newDocInstallFolder/help)
```

Replace `newDocInstallFolder` with the path to the network folder where you installed the documentation.

Alternatively, give this part of the instructions to your users to have them do it themselves.

- 3 Restart MATLAB on each user machine (or have the user do it).

Access the documentation as you typically would, online or offline. If MATLAB still tries to open documentation on the web, go to the **Home** tab, and in the **Environment** section, click **Preferences** and select **MATLAB > Help**. Under **Documentation Location**, select **Installed locally**.

Notes

- To revert back to documentation on the web, go to the **Home** tab, and in the **Environment** section, click **Preferences** and select **MATLAB > Help**. Under **Documentation Location**, select **Web, on mathworks.com**.

- To update installed documentation after adding or removing products, or to make sure you have the most recent documentation, repeat this procedure.

Install MATLAB Server Products

You can download server products such as MATLAB Parallel Server, MATLAB Web App Server, and MATLAB Production Server from the MathWorks Downloads page. After installation, these products require additional steps to be executed to set up the server. For example, many server products require navigating to the installation directory and executing setup commands.

MATLAB Parallel Server

To install and set up MATLAB Parallel Server, choose an installation workflow from Choose Solution to Install and Configure MATLAB Parallel Server.

MATLAB Production Server

To install MATLAB Production Server, see Install MATLAB Production Server Product.

To set up the server instance, use either the command line or the dashboard interface.

- Set Up MATLAB Production Server Using the Command Line
- Set Up and Log In to MATLAB Production Server Dashboard

MATLAB Web App Server

To install MATLAB Web App Server, see Install or Uninstall MATLAB Web App Server Product.

To set up the server instance, see Set Up MATLAB Web App Server.

MATLAB Online Server

To install MATLAB Online Server™, choose an installation procedure based on your environment from Installation.

Installation options for clients in a network configuration

Plan Your Network License Manager Installation and Configuration

Installation Procedures for Network License Manager

For network installations, MathWorks uses a license manager program from Flexera Software, Inc. (referred to in this documentation as the network license manager).

It is a good practice to install the network license manager before installing MATLAB. Doing so makes it easier to verify your MATLAB installations, because you can confirm the client computers are accessing the license server correctly at the time of installation.

Select a procedure from the Administer Network Licenses category to install and run the network license manager.

After you have installed the network license manager, select a procedure for installing MATLAB.

Caution Follow these recommendations when planning your network installation:

- Do not expose the commands to run the network license manager to the Internet or an untrusted network.
 - Start the network license manager so that local administrator access is required to run the shutdown procedure.
-

Installation Procedures for MATLAB

To install MATLAB on user computers, you must be:

- An administrator for the license that you want to install
- A user named on the license or who has linked the network license to their MathWorks Account

Use the following table to choose an appropriate MATLAB installation procedure.

Type of Installation	Person Who Installs	Procedures
Install and activate interactively with an Internet connection.	Administrator or user	<p>Administrators:</p> <p>Follow the instructions in “Download and Install MATLAB” on page 1-3.</p> <p>Users:</p> <p>Follow the directions in “Have End Users Install Products” on page 2-11. Then, follow the instructions in “Download and Install MATLAB” on page 1-3.</p>

Type of Installation	Person Who Installs	Procedures
Administrator downloads installer. User installs and activates interactively with an Internet connection.	Administrator and user	Follow the directions in “Have End Users Install Products” on page 2-11. Then, have the end user follow the instructions in “Download and Install MATLAB” on page 1-3.
Install and activate interactively on an offline computer	Administrator or user	Follow the directions in “Have End Users Install Products” on page 2-11.
Administrator downloads installer. User installs and activates interactively on an offline computer.		Then, use the instructions in “Install MathWorks Products on Offline Computer” on page 1-9.
Install in silent mode. Instead of performing the installation interactively and providing the information requested by each dialog box, you can run the installer noninteractively. In this mode, you enter all required information into a properties file.	Administrator or knowledgeable user	“Perform Silent Installation Using MathWorks Product Installer” on page 2-8

Update or Modify Network License Files

About Network Licenses

Network licenses contain the encrypted passcodes for each product that your organization is licensed to install and run.

In general, you do not need to modify the network license file on the server or on the client computers. However, in some situations, you must edit the license file:

- When you change the license server name (for example, if the license is now being hosted on a new server).
- When you change the port number (for example, if the port address for the server has changed). See [How do I migrate my MATLAB clients to a new license server when the license server changes?](#)
- When you update the network installation with a new license file. See [MATLAB Answer How Do I Update the License File Used By the License Manager?](#)

Inside the Network License File

The network license file is a specially formatted ASCII text file that contains encrypted product passcodes for each product you are licensed to run. Each product passcode identifies the number of keys available for that product. The network license manager grants or denies access to a product depending on the availability of the license keys associated with each product.

- Each INCREMENT line identifies a product, the number of keys available for the product, and other information. (The INCREMENT lines in your license file might not include every element shown in the example.)
- The backslash (\) character indicates that the line continues onto the next line.
- The lines that begin with a pound sign (#) are comments. The MathWorks installer uses the information in these comment lines such as license server host ID or Internet address when it processes the license file during installation.

```
# BEGIN-----BEGIN-----BEGIN
# MATLAB license passcode file.
# LicenseNo: 123456           HostID: 6C4B905F446E

```

License Processing

When you install the network license manager or MATLAB software, the installer processes the network licenses for use on the server and client machines, respectively:

During Network License Manager Installation on Server

On the server, the installer:

- Makes a copy of the network license file named `license.dat`, processes the file to add the `SERVER` and `DAEMON` lines, and puts this copy in the `/etc` folder where you are installing the network license manager.
- The `SERVER` line identifies the server host and port number. The `DAEMON` line identifies the name of the network license manager daemon.
- For Network Named User licenses, when the installer creates an options file during installation, it also adds the `Options=` syntax to the `DAEMON` line in your license file. This syntax specifies the path name of the options file.

For example, if your server is named `thunderball` and its MAC address is `03:42:f8:1b:b2:72`, the `SERVER` and `DAEMON` lines in your license file would look like this:

```
SERVER thunderball 03:42:f8:1b:b2:71
DAEMON MLM "C:\Program Files\MATLAB\R2024a\etc\win64\MLM.exe" \
           options="C:\Program Files\MATLAB\R2024a\etc\mlm.opt"
```

During MATLAB Installation on Client Computer

First, you must copy the `license.dat` file configured during the installation of the network license manager and put it either on the client machine or somewhere network accessible before you can run the installer.

Then, during installation, the installer creates a copy of `license.dat`, and processes it to remove the `INCREMENT` lines and the `DAEMON` line in the license file, leaving the `SERVER` line. It also adds the statement `USE_SERVER` to the file. This line points the client to the network license file on the server, which contains all the passcodes for the products.

It names this configured file `network.lic` and puts the file in `matlabroot\licenses`.

Note Do not give users the license file you download from License Center. They can install only with the license file that was specially configured during the installation of the network license manager.

MATLAB License Search Path

MATLAB reads the license file at startup to check for product licensing. MATLAB searches for the license file in the following locations, in the specified order:

- 1 The license file specified on MATLAB startup command line using the `-c` option. The `-c` option overrides the entire search order and uses only what was specified on the command line. This is the *only* path MATLAB searches.
- 2 Environment variables `MLM_LICENSE_FILE` and `LM_LICENSE_FILE`.
- 3 The profile folder of the person starting the program
- 4 The `\licenses` folder in the MATLAB installation for files named `license.dat` or any file with the extension `.lic`.

When MATLAB is checked out from a network license server, all toolbox checkouts in that same session will also come from that license server. If a license file on the path is not a server license (that

is, it is a standalone license file for Individual, Designated Computer, or Trial), toolboxes can still be checked out from that file or from the license server.

Set MATLAB License Search Path

By default, MATLAB installs the license file on the client computer in the `\licenses` folder in the MATLAB client installation folder. However, you can override that location in one of either of the following ways:

- Specify the path to the license file on the command line during MATLAB startup using the `-c` option.

The `-c` option overrides the entire search order, including environment variables, and uses *only* what was specified on the command line. This is the *only* path MATLAB searches.

You can specify a list of paths to search. When using the `-c` option, keep in mind the following:

- If the path to your license file contains a space, enclose the path name in quotation marks.
- If you are specifying more than one license file, make sure to enclose the entire list of license files in quotation marks.
- Set environment variable.

MLM_LICENSE_FILE specifies the location of the license file for MathWorks products. MATLAB searches for this environment variable first.

Note Although you can set the environment variable `LM_LICENSE_FILE`, use of this variable is discouraged as it affects all Flex-enabled products. Instead, use `<VENDOR>_LICENSE_FILE`.

Note If you use the environment variable `MLM_LICENSE_FILE`, you must delete `matlab/licenses/network.lic`.

Update Network License

When you receive a new license from MathWorks because the products or seat counts have changed, plan to update the license file on the network server at a time when users are least likely to be accessing a MATLAB license. This procedure requires you to stop and start the network license manager (do not perform a re-read as it can interfere with certain licenses).

Note Do not follow this procedure to upgrade to a new release of MATLAB. To upgrade to a later release, see “Get New MATLAB Release”.

You must be a license administrator to perform a license file update.

To update the license file on the server:

- 1 Go to the License Center on the MathWorks website and sign in to your account.
- 2 Select the licenses you want to update.
- 3 Click **Install and Activate**.

- 4 Get the license file for the server you are updating.
- 5 Stop the network license manager.
- 6 Open both the existing license on the server and the new license in an editor. You are going to copy most of the new license into the old license with these instructions:
 - a In the existing license, delete all content except the SERVER and DAEMON lines at the top of the file.
 - b In the new license, copy all content starting from below the SERVER and DAEMON lines to the end.
 - c Paste the copied content into the existing license below the SERVER and DAEMON lines.
 - d Save the existing license. You can store the new license as a backup, remembering that the SERVER and DAEMON lines must be replaced with those specific to your organization.
- 7 If you have an options file, depending on how it is configured, you may have to update it. If you do not have an options file, skip this step.
- 8 Start the network license manager.

You can perform a status inquiry to confirm that the license file has been updated. The following support article contains instructions for performing a status inquiry: "Monitor the Usage of Licenses or Keys".

- [License Center](#)

Perform Silent Installation Using MathWorks Product Installer

If you have to perform many MATLAB software installations, and the information you need to enter for each installation is the same, you can put this information in a properties file and run the MathWorks installer noninteractively. You specify the properties file at the command line when you start the installer. The file provides information to the installer that you would otherwise enter interactively, using the installer dialog boxes. Noninteractive installation, also called a silent installation, can save time and prevent errors.

Prerequisites

You need a File Installation Key to use the installer properties file (`installer_input.txt`). For information on how to get a File Installation Key, see “Install MathWorks Products on Offline Computer”.

Download Installer and Products

Download an installer containing the MathWorks products you want to install on the target computers. The download procedure to use depends on whether you want to install only a subset of products for which you have licenses or all products for which you have licenses.

Download Subset of Products Using Download-Only Installer

If you need to install only a subset of products on the target computers, use the MathWorks installer to download a separate installer containing those products.

- 1 Go to MathWorks Downloads, select the release and platform of the computer you are using to perform the download, and download the installer.
- 2 Run the downloaded installer, sign in to your MathWorks Account, and accept the license agreement.
- 3 Under **Advanced Options**, select **I want to download without installing**.
- 4 Specify where you want to download the installer, the platform of the target computers, and the products you want to include in the download. Then, download the installer containing the product files.
- 5 Copy the installer to a location that each target computer can access, such as a local folder on each target computer or a network share.

Download All Products Using ISO or DMG Image

If you need to install all products on the target computers, download the ISO (Windows, Linux) or DMG (Mac) image containing all products. To download an ISO or DMG, you must be a license administrator.

- 1 Go to MathWorks Downloads, and from the **I Want To** menu, select **Get ISOs and DMGs**. This link is visible only if you are signed in as a license administrator.
- 2 Select the release and update of the ISO or DMG you want to download.
- 3 Under **Get ISOs and DMGs for MATLAB and Simulink Products**, select the platform of the target computers (not the computer you are using to perform this download) and download the ISO or DMG.

- 4 Using the standard process for your operating system, mount the downloaded ISO or DMG image to a folder.
- 5 Copy the installer to a location that each target computer can access, such as a local folder on each target computer or a network share.

Create Installer Properties File

- 1 Make a copy of the installer properties file `installer_input.txt`. This file is located in the top level of the folder containing the installer.

For example, on a Windows computer, you might execute this command:

```
copy Z:\installer_input.txt C:\temp\my_installer_input.txt
```

- 2 Open the copied installer properties file using any text editor.
- 3 Uncomment only the parameters that start with a single `#` symbol and enter the appropriate values. For example:
 - `destinationFolder` — Specify the path to the folder where you want to install products. You must specify the full path. Specifying a relative path might cause the `installer_input` file to be read incorrectly. This table shows sample destination folders for each operating system.

Operating System	Example
Windows	<code>destinationFolder="C:\Program Files\MATLAB\R2024a"</code>
Linux	<code>destinationFolder=/opt/MATLAB/R2024a</code>
macOS	<code>destinationFolder=/Applications</code>

- `fileInstallationKey` — Specify the value of your File Installation Key.

The comments section for each parameter defines all allowed values for the parameter.

- 4 Save your changes to the file.

Run Installer Using Properties File

- 1 Navigate to the folder containing the installer and products.
- 2 In a command window or terminal, start the installer using the `-inputFile` option to specify the full path of your installer properties file as a command-line argument.

On Windows, run the `setup.exe` application with the `-inputFile` option. For example:

```
setup.exe -inputFile C:\temp\my_installer_input.txt
```

On Linux or macOS, run the `install` script with the `-inputFile` option. For example:

```
install -inputFile /tmp/my_installer_input.txt
```

View Installation and Activation Log Files

During the installation and activation of MathWorks products, the product installer creates a log file that can be used to obtain information on these processes.

The installation log file is named `mathworks_%username%.log` and the activation log file is named `aws_%username%.log`. In both cases, `%username%` is the username of the person running the installer.

To locate your log files, see [Where Are the MATLAB Installation and Log Files Located?](#)

Have End Users Install Products

Note If you arrived at this topic because of the error "Network License File Required" and you have already linked the network license to your MathWorks Account, contact your administrator to get a copy of the network license file, and then return to the installer.

Note These instructions are to help the user on the network license install on their own machine. If you are an administrator installing software for your end users, see "Install Products on Client Machines". Otherwise, see instructions below for giving your users the items they need to install successfully.

License Requirements

All network license users must have a configured copy of the network license (`license.dat`) on their machine or accessible from a network share before they can install products.

- **Administrators** - Before your network users install MATLAB, give them a copy of `license.dat` from the network license manager. This network license file was processed during the installation of the network license manager for your organization, meaning it contains the correct `SERVER` line for the network license server you are using. To learn more about how the network license is processed during installation, see "License Processing".

Do not give users a copy of the original license file you received in the licensing email. They cannot use the licensing information in this form — it does not include the correct `SERVER` line. Also, do not forward to users the licensing email you received from MathWorks.

- **MATLAB Users** - You must get a copy of `license.dat` from your license or network administrator before you can install MathWorks products.

If you are using a trial license, go to <https://www.mathworks.com/licensecenter/trials>.

Select a Procedure

Consult the following table to determine which procedure to use.

Scenario	Procedure to follow
You plan to update and upgrade MATLAB releases yourself.	"Option #1: Link Network License to Your MathWorks Account"
You are asked to perform this installation only one time and do not expect to be installing updates and upgrades yourself. If your computer is offline, you must use this option.	"Option #2: Use License File and File Installation Key to Install"

Multiple Releases You can install multiple releases on the same machine. For example, you can have both R2022a and R2022b, or R2022b and R2023a.

Option #1: Link Network License to Your MathWorks Account

If your computer is offline, you must follow the workflow in Option #2.

To link your network license:

- 1** Contact your administrator to get the network license number you should use.
- 2** To link the license to your MathWorks Account, follow the instructions in Link an additional license (you may have to sign in first).

If you do not have a MathWorks Account, you can create one at the linked page.

- 3** Get a copy of your organization's network license file from your administrator and copy this license file to the machine where you are planning to install.

If you select this option, you can follow the online installation procedure as documented in “Download and Install MATLAB” with the following difference:

During the online installation, when prompted, specify the network license linked to your account. The installer recognizes it as a network license and prompts you for the license file. Enter the path to the license file and click **Next** to continue installing.

Option #2: Use License File and File Installation Key to Install

For this workflow, your computer can be connected to the Internet or offline. If your machine is offline, you must use this workflow.

- 1** Contact your administrator to get a copy of the network license file (see “License Requirements”) and a file installation key (FIK).
- 2** Copy the network license file and FIK to the machine where you are planning to install MATLAB.
- 3** Follow the procedures in “Download Products Without Installing” and “Install MathWorks Products on Offline Computer”. If your administrator downloaded the installer, ask them to give you access to the files.

Activate MATLAB Installation Manually

Activation Overview

Activation is a process that verifies licensed use of MathWorks products. This process validates the license and ensures that it is not used on more computers or by more users than allowed by the license option you selected. Normally, activation is performed during installation, and there is no separate action for the end user.

However, there may be occasions to manually activate the software, for example, if the activation during installation fails for some reason, or if the installation was performed using a File Installation Key and no license was supplied.

This topic describes how to activate the software manually should you need to.

You can follow these procedures also if you are an end user who has been asked to activate MATLAB software that was not installed by you.

- To perform an online activation from within MATLAB, the computer must be connected to the Internet.
- To perform an offline activation from within MATLAB, you must have a license file.
 - If you are using an individual license, use an online machine to go to License Center to get the license file (if you don't know what type of license you have, you can find that out in License Center).
 - Select license to use.
 - Go to the Install and Activate tab.
 - Click **Activate to Retrieve License File**. Download and transfer the license file to the offline machine.
 - If you are using a shared license, contact your administrator to get a license file configured especially for your organization. Copy it to the offline machine.

Step 1. Launch Activation App

You can launch the activation app from within MATLAB or from the operating system command line.

Launch Activation App from MATLAB

Follow these steps:

- 1 On the **Home** tab, in the **Resources** section, click **Help > Licensing**.
- 2 Select **Activate Software**.

Launch Activation App from Command Line

- **Windows Systems** — in the search box on the taskbar, enter "Activate" to bring up the **Activate MATLAB** application.
- **macOS Systems** — Double-click the activation application icon in the MATLAB application package. To view the contents of the MATLAB application package, right-click (or **Ctrl**+click) the package and select **Show Package Contents**.

- Navigate to your MATLAB installation folder and open the activation application.
 - **Windows Systems** — Double-click the `MathWorksProductAuthorizer.exe` file in `matlabroot\bin\ARCH` folder, where `matlabroot` is your MATLAB installation folder, and `ARCH` is a platform-specific subfolder, for example: `matlabroot\bin\win64`.
 - **Linux and macOS Systems** — Run `MathWorksProductAuthorizer` in the `matlabroot\bin\ARCH` folder, where `matlabroot` is your MATLAB installation folder, and `ARCH` is a platform-specific subfolder, for example: `matlabroot\bin\glnxa64` folder.

Step 2. Activate License

Note The license file (offline) workflow is started automatically if the computer is offline. However, if the computer is connected to the Internet, it starts the online workflow.

- To switch to the license file workflow, from **Advanced Options**, select I want to use a license file.
 - To switch from the license file workflow to the online workflow, from **Advanced Options**, select I want to link to a license.
-

Online Workflow

- 1 Enter the email address you use for your MathWorks Account.
If you do not have a MathWorks Account, you can create one at this time.
- 2 Select a license from the list of licenses linked with your MathWorks Account and then click **Next**.
- 3 Make sure the selections are correct and then click **Activate**.

Offline (License File) Workflow

- 1 If you are prompted for your email address, under **Advanced Options**, select I want to use a license file.
- 2 Enter the path to the license file and then click **Activate**.

What's Next?

You are now ready to begin using MathWorks software.

Install Network License Manager

Install and run the network license manager for Network Named User and Concurrent licenses.

Install Network License Manager Offline

Use a network license file to install the network license manager on a machine that does not have an internet connection. However, you must first download the installer and the license file from a computer that does have an internet connection.

You must install the license manager and have it running before you install MATLAB software on client systems. For information about installing MathWorks software on client systems, see “Plan Your Network License Manager Installation and Configuration” on page 2-2.

You need to install the network license manager only one time at a site.

Step 1. Download License File

Perform these steps on a machine that is connected to the Internet.

- 1 Go to License Center on the MathWorks website. Sign in to your MathWorks Account, if prompted.
- 2 Click the network license you want to use.
- 3 Click the **Install and Activate** tab and then click **Activate a Server**.
- 4 Obtain the host ID of the computer on which you intend to run the network license manager. See *What is a Host ID?* in *MATLAB Answers*.
- 5 Specify the operating system type and host ID of the computer on which you intend to run the network license manager. You can optionally assign a descriptive label to the activation as well. Click **Continue**.
- 6 Answer "No" to **Is the software already installed?** and click **Continue**.
- 7 Select either **Download the License File** or **Email License File**.

Whichever option you selected, remember to save the license file to the server where you will be installing the network license manager.

Click **Continue**.

For this workflow, you can skip steps 2 and 3 in License Center and continue following these instructions.

Step 2. Download Installer

- 1 On a computer connected to the Internet, download the MathWorks product installer from the Downloads page on the MathWorks website.
- 2 Copy the installer files and the license file to the server where you will be installing the network license manager.

Step 3. Start Installer

- 1 Start the installer.
 - **Windows Systems**

If you click **Run** when you select the installer on the MathWorks website, the installer starts automatically. If you saved the installer instead, double-click the self-extracting installer file in

the folder where you saved it. The name of the self-extracting installer file is `matlab_release_$ARCH`, where *release* is the release you are installing (for example R2020a) and *\$ARCH* is the selected architecture.

The installer should start automatically after file extraction is complete.

To restart the installer later, click `setup.exe`. This file is located in the top level of the folder where you extracted the files.

- **macOS Systems**

Double-click the `dmg` file that you downloaded from the MathWorks website. Double-click `InstallForMacOS.app`.

- **Linux Systems**

Use the `unzip` command to extract the files from the archive file that you downloaded from the MathWorks website. After extracting the files, execute the installer command:

```
./install
```

Step 4. Review Software License Agreement

Review the software license agreement and, if you agree with the terms, select **Yes** and click **Next**.

Note To view the end user license agreement at any time after installation, execute the following command in the MATLAB Command Window:

```
>> edit( fullfile(matlabroot, 'license_agreement.txt') )
```

Step 5. Select License File

Provide the name and path to the license file that you downloaded in Step 1. Click **Next**.

If the installer cannot find the host ID in the license, you will get a message instructing you to manually add the host ID after you finish installing.

Step 6. Select Destination Folder

The destination folder is where you want to install the network license manager. Accept the default installation folder, or click **Browse** to select a different one. If the folder does not exist, the installer creates it.

The destination folder must be on an absolute path. MathWorks recommends that you install the network license manager in its own folder. If you select the top-level drive, you will be asked to confirm your selection.

When specifying a folder name:

- You can use any alphanumeric character and some special characters, such as underscores.
- You cannot use non-English characters.

- Folder names cannot contain invalid characters and the destination cannot be named “private.”

If you make a mistake while entering a folder name and want to start over, click **Restore Default**.

Step 7. Select Options (Windows Systems Only)

Configuring the network license manager service provides automatic startup at system boot time and centralizes administration of the license manager through the Windows Services control panel. If you want the license manager to start automatically when you start the system, check **Configure as service**.

To review the default network license manager configuration settings, click **View Default Settings**. If you choose not to configure the network license manager service, you can do it later.

Note If you have an existing network license manager that you want to continue to use until you install the new one, do not check **Configure as service**. The installer still installs the network license manager files. After installation, you can stop your existing license manager and start your new license manager.

Step 8. Confirm Selections and Install

Review the summary of your installation choices. To change a setting, click the topic on the navigation bar. To proceed with the installation, click **Begin Install**.

When the installation is complete, note if the installer shows you any additional steps required to complete configuration, and click **Close**. If additional steps are required, complete them before installing and running MATLAB on client machines.

Install Network License Manager Using Internet Connection

Install the network license manager on a computer connected to the internet. You must install the license manager and have it running before you install MATLAB software on client systems. See “Plan Your Network License Manager Installation and Configuration” on page 2-2.

You need to install the network license manager only one time at a site.

Step 1. Download License File

- 1 Go to License Center on the MathWorks web site. Sign in to your MathWorks Account, if prompted.
- 2 Click the network license you plan to use for this installation.
- 3 Click the **Install and Activate** tab and then click **Activate a Server**.
- 4 Obtain the host ID of the computer on which you intend to run the network license manager. See What is a Host ID?.
- 5 Specify the operating system type and host ID of the computer on which you intend to run the network license manager. You can optionally assign a descriptive label to the activation as well. Click **Continue**.
- 6 Answer "No" to **Is the software already installed?** and click **Continue**.
- 7 Select either **Download the License File** or **Email License File**.

Whichever option you selected, remember to save the license file to the server where you will be installing the network license manager.

Click **Continue**.

For this workflow, you can skip steps 2 and 3 in License Center and continue following these instructions.

Step 2. Download and Start Product Installer

- 1 Download the MathWorks product installer from the Downloads page on the MathWorks website.

When you select an installer on the website, you receive the files that the installer needs to run on your selected platform, not the license manager files. The installer downloads the files that it needs from MathWorks during installation.

- 2 Start the installer.

- **Windows Systems**

If you click **Run** when you select the installer on the MathWorks website, the installer starts automatically. If you saved the installer instead, double-click the self-extracting installer file in the folder where you saved it. The name of the self-extracting installer file is `matlab_release_$ARCH`, where *release* is the release you are installing (for example R2020a) and *\$ARCH* is the selected architecture.

The installer should start automatically after file extraction is complete.

To restart the installer later, click `setup.exe`. This file is located in the top level of the folder where you extracted the files.

- **macOS Systems**

Double-click the `dmg` file that you downloaded from the MathWorks website. Double-click `InstallForMacOS.app`.

- **Linux Systems**

Use the `unzip` command to extract the files from the archive file that you downloaded from the MathWorks website. After extracting the files, execute the installer command:

```
./install
```

- 3 When the installer prompts you to sign in, click **Advanced Options > I want to install network license manager**.

Step 3. Review Software License Agreement

Review the software license agreement and, if you agree with the terms, select **Yes** and click **Next**.

Note To view the end user license agreement at any time after installation, execute the following command in the MATLAB Command Window:

```
>> edit( fullfile(matlabroot, 'license_agreement.txt') )
```

Step 4. Select License File

Provide the name and path to the license file that you downloaded in Step 1. Click **Next**.

If the installer cannot find the host ID in the license, you will get a message instructing you to manually add the host ID after you finish installing.

Step 5. Select Destination Folder

The destination folder is where you want to install the network license manager. Accept the default installation folder, or click **Browse** to select a different one. If the folder does not exist, the installer creates it.

The destination folder must be on an absolute path. MathWorks recommends that you install the network license manager in its own folder. If you select the top-level drive, you will be asked to confirm your selection.

When specifying a folder name:

- You can use any alphanumeric character and some special characters, such as underscores.
- You cannot use non-English characters.
- Folder names cannot contain invalid characters and the destination cannot be named “private.”

If you make a mistake while entering a folder name and want to start over, click **Restore Default**.

Step 6. Select Options (Windows Systems Only)

Configuring the network license manager service provides automatic startup at system boot time and centralizes administration of the license manager through the Windows Services control panel. If you want the license manager to start automatically when you start the system, check **Configure as service**.

To review the default network license manager configuration settings, click **View Default Settings**. If you choose not to configure the network license manager service, you can do it later.

Note If you have an existing network license manager that you want to continue to use until you install the new one, do not check **Configure as service**. The installer still installs the network license manager files. After installation, you can stop your existing license manager and start your new license manager.

Step 7. Confirm Selections and Install

Review the summary of your installation choices. To change a setting, click the topic on the navigation bar. To proceed with the installation, click **Begin Install**.

When the installation is complete, note if the installer shows you any additional steps required to complete configuration, and click **Close**. If additional steps are required, complete them before installing and running MATLAB on client machines.

Update Network License Manager Software

Updating the network license manager software requires you to stop and then restart the license manager. You must be a network license administrator to perform this procedure.

To avoid any potential issues with license file operation, consider upgrading the network license manager software whenever you upgrade MATLAB software.

Step 1. Stop Network License Manager

If the network license manager is running, shut it down.

- **Linux and macOS Systems** — Use the `lmdown` command. For additional information, see “Using Command-Line Utilities”.
- **Windows Systems** — Remove the existing service to prevent any conflicts.
 - 1 Start LMTOOLS by double-clicking the `lmtools.exe` file in the `matlabroot\etc\$ARCH` folder, where `matlabroot` is your MATLAB installation folder and `$ARCH` is a platform-specific subfolder, such as `win64`.
 - 2 Select the **Config Services** tab.
 - 3 From the **Service Name** menu, select the service you want to remove, and click **Remove Service**.

Step 2. Select Installation Method

You can choose to download only the software daemons or use the MATLAB installer to update the network license manager.

Update Network License Manager Software with Daemon Download

If you already have the network license manager installed and configured, you can download new network license manager daemons directly to your server instead of using the MathWorks installer to install the latest version of the software. The license manager daemons include:

- **lmgrd** — Network license manager daemon
 - **mlm** — MathWorks vendor daemon
- 1 Stop the network license manager as described in Step 1.
 - 2 Download the ZIP file for your platform from License Manager Download on the MathWorks website.
 - 3 Extract the files from the ZIP file to the network license manager folder. The default location for the license manager files is the `matlabroot\etc\$ARCH` folder, where `matlabroot` is your MATLAB installation folder and `$ARCH` is a platform-specific subfolder.
 - 4 Restart the network license manager, and configure it as needed.

Update Network License Manager Software Using MATLAB Installer

- 1 Stop the network license manager as described in Step 1.
- 2 Install license manager software update. Follow the procedure in “Install License Manager on License Server”.
